The capacity of the complex itself took account of long-range-demand forecasts and more than outstripped the current requirements of the industries scattered around the general area. Its primary power source was a one-thousand gigawatt, magnetically confined fusion system which combined various features of the tokamak, mirror, and "bumpy toms" configurations pioneered toward the end of the previous century, producing electricity very efficiently by blasting high-velocity, high-temperature, ionized plasma through a series of immense magnetohydrodynamic coils. In addition, the fast neutrons produced in copious amounts from this process were harnessed to breed more tritium fuel from lithium, to breed fissionable isotopes of uranium and plutonium from fertile elements obtained elsewhere in the same complex, and to "burn up" via nuclear transmutation the small amounts of radioactive wastes left over from the economy's fission component, the fuel cycle of which was fully closed and included complete reprocessing and recycling of reactor products. seconds after storming out of the semi, they're forming up and hurrying toward the restaurant and the glamour of berets and billycocks, panamas and turbans, cloches and calashes. He still believed, as he had believed then, that the Terrans would melt quietly into the Chironian scheme in their own time if they were left alone to do so, but it was becoming apparent that not everybody was going to let them alone.
